

Togo Vans Transform Waste Management

Thane • Published: 03 Dec 2025 • Source: www.pratapsarnaik.com

The Togo Van System marks a major shift toward efficient, decentralised waste processing in the city. Designed to treat wet waste on the move, it reduces the burden on dumping grounds and strengthens daily cleanliness efforts. This model supports faster processing, cleaner surroundings, and a more accountable civic mechanism.

Key Highlights

- Door-to-door wet waste collection
- On-board composting with a seven-day cycle
- Up to 90% waste volume reduction
- Compost used for gardens & civic landscapes
- Eco-friendly vans powered by CNG & solar support

The system ensures immediate waste treatment without transporting it long distances, making it a practical urban solution. It creates high-quality compost for public spaces, helps housing societies adopt responsible waste habits, and encourages a culture of daily segregation. This forward-looking approach supports a cleaner environment and reduces municipal load.

Driven by the vision of **Shri Pratap Sarnaik**, the Togo Van System stands as a meaningful step toward sustainable city governance. It reflects a commitment to cleaner neighbourhoods, smarter waste solutions, and a greener future for every citizen.
